E11.5 Mouse Endodermal Organ Gene Expression - Study GBCO3547**Genomics Study Specifications**

Study Name	E11.5 Mouse Endodermal Organ Gene Expression
Contact Name	Douglas Melton (Harvard University)
Publication	http://www.ncbi.nlm.nih.gov/pubmed/19097184
My Strategies	Return to My Strategies page
Classification	Tissue expression, surveys and comparisons
Links	 Biomaterials Graph  GEO
BCBC Release Date	February 09, 2009
Public Release Date	February 09, 2009
Citation	Sherwood RI, Chen TY, Melton DA. Transcriptional dynamics of endodermal organ formation . Dev Dyn. 2009. 238:29-42

Synopsis**Study Description**

Goals

Approaches

Results

Conclusions

Related Studies

To study gene expression during endodermal organogenesis, we sought to identify genes expressed in restricted domains during organogenesis. For gene expression analysis, six morphologically distinct endodermal domains were dissected at E11.5: the esophageal region; the lung and distal tracheal region; the stomach region; the hepatic region; the dorsal and ventral pancreatic region; and the intestinal region. Through flow cytometric separation using EpCAM expression to distinguish endoderm from surrounding mesenchyme, pure populations of endoderm progenitors from the esophageal, lung, stomach, pancreatic, and intestinal regions were isolated. Expression of Liv2 was used to isolate a pure population of hepatic endoderm progenitors.

Platform types	Expression, Expression microarray
Platforms	Show platform Illumina MouseRef-8 v2.0 expression beadchip
Study Design Type	<ul style="list-style-type: none"> development_or_differentiation_design organism_part_comparison_design
Study Factors	Show study factors
Study Assays	Show study assays

Access to Study Data

This Study Data is publicly available to all users.
